Problem Statement

Problem: Marketing doesn't have a strategic method to target potential customers.

Why it needs to be addressed: Our conversion rates are significantly lower than the industry average thus causing our ROI to suffer. This is costing us $5MM per year.

Proposed Solution: Leverage a machine learning model to predict which users are going to purchase in the following month. The marketing team can then use these results for their marketing campaigns.

Solution Performance

90%

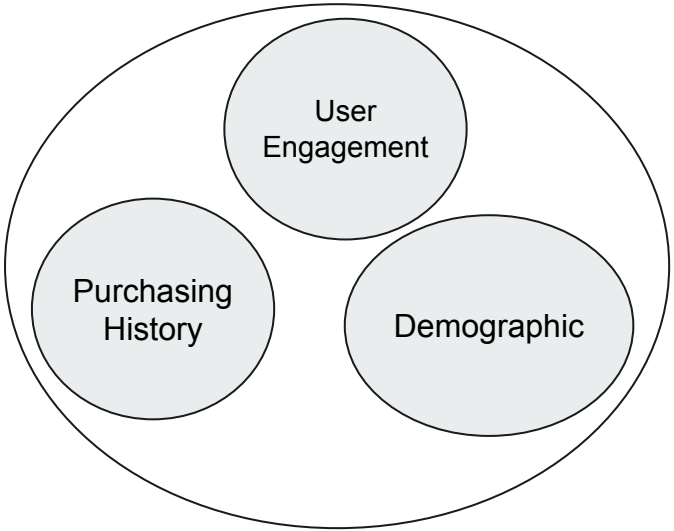

Precision*

95%

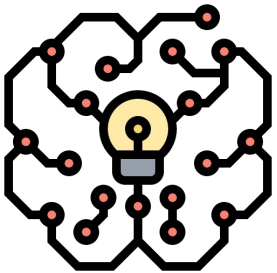

Recall*

** Industry standard for precision and recall is 0.8 and 0.85, respectively.*

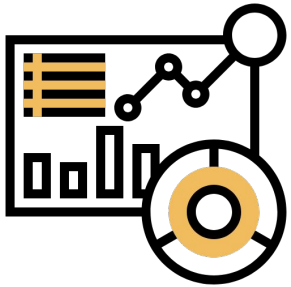

Modeling Approach

150 Total Features

ML Model
(XGBoost)

Dashboard To Be Used By Marketing

Next Steps

1. Productionalize Model
    a. Resources Required: Data Engineering/Machine Learning Engineering
    b. ETC: 6 Weeks
2. Develop Dashboard for consumption
    a. Resources Required: Marketing/Data Analytics
    b. ETC: 4 Weeks
